

Light

We need light
to see things.

Light travels in
straight lines.
This is why
the shadow is
the shape
of the moon.

The moon moves
around the earth.

When the moon is
between the sun and the
Earth, it casts a shadow –
this is called an 'eclipse'.

Dark means that
light is not there.

Never look
directly at the
sun, as it will
harm your eyes.
Your eyes can
be protected by
looking through
smoked glass.
